ASX Announcement

CAMEROON DRILLING PROGRAMME RECOMMENCES

- **Drill pad and access works commenced**
- **Additional support vehicles to be acquired**
- **Reconnaissance work over southern aeromagnetic features continuing**

Diamond Drilling

Legend Mining has re-started the drill programme which was suspended in September 2010 due to monsoonal rains. Two bulldozers commenced work on 29 November preparing drill pads and rig access tracks in the Eseka region at the Ngovayang Project. Diamond drilling will start mid January 2011. The initial 5,000m programme will continue as planned, targeting seven prospects in the northern part of the project.

Legend Managing Director Mr Mark Wilson said, "We are looking forward to drilling our priority targets at Eseka. We are also expanding our motor vehicle fleet by acquiring an all terrain vehicle and extra 4WD vehicles which will greatly assist the logistical support of the drilling operations".

Regional Reconnaissance

Extensive regional reconnaissance is currently being undertaken by the eight man geological team over strong aeromagnetic features in the southern part of the Ngovayang Project area. This work is aimed at identifying surficial evidence of iron deposits associated with coincident magnetic and topographic highs. First pass reconnaissance work is expected to be completed by Christmas, with any prospective areas identified during this work fast tracked to the drill testing stage.

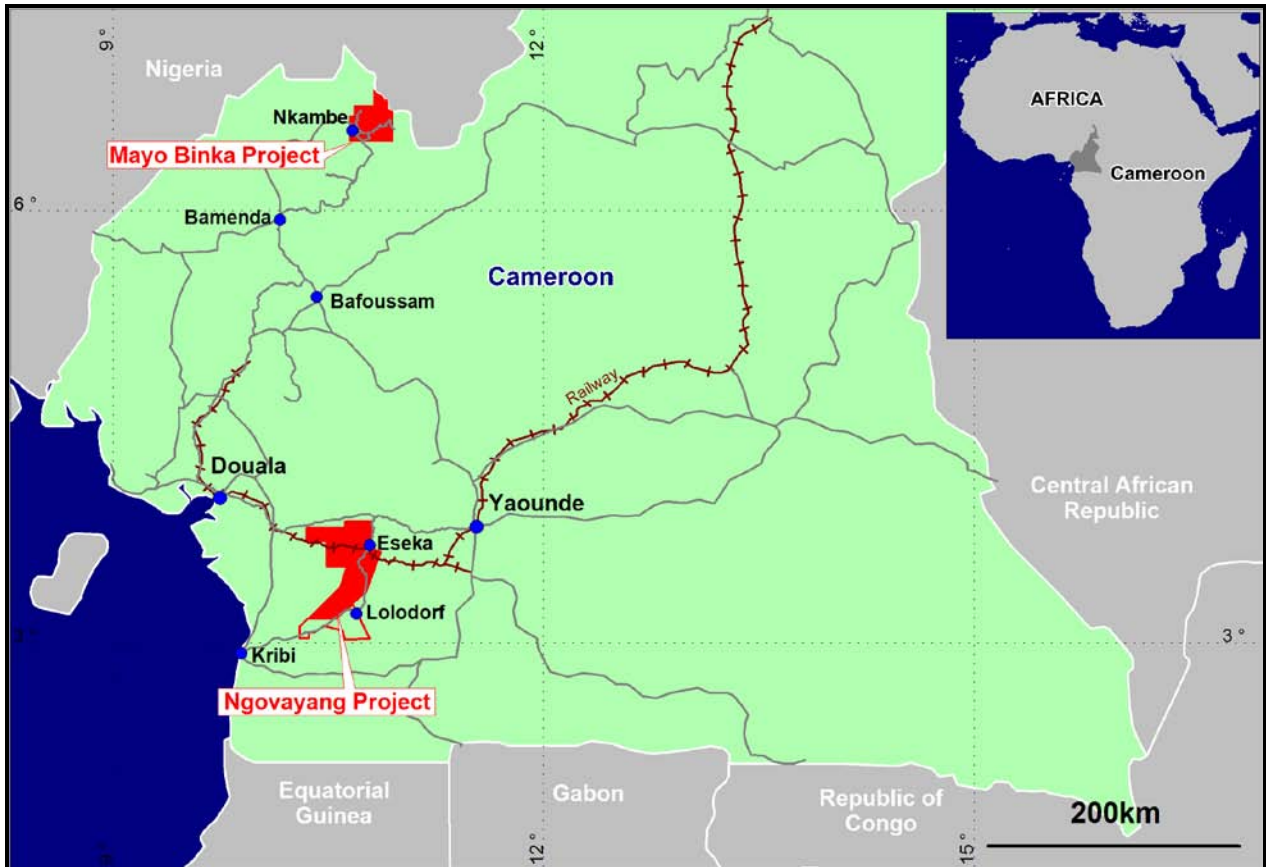

"The only way to first pass evaluate the potential is to cover the ground and that's exactly what our geologists are doing. This reconnaissance work is very challenging given the rugged terrain and thick vegetation, however because of these factors, limited if any reconnaissance has been undertaken previously", Mr Wilson said.
