ASX Announcement

LEGEND DISCOVERS OUTCROPPING COPPER-NICKEL-PLATINUM GROUP ELEMENT MINERALISATION AT GUM CREEK

Legend Mining Limited ("Legend") (ASX:LEG) today announced the discovery of copper-nickel-platinum group element (Cu-Ni-PGE) mineralization in outcropping gossanous ironstone within its wholly-owned Gidgee Project in the Gum Creek Greenstone Belt (Gum Creek). Rock samples (see photograph) assayed up to 5.7% copper (Cu), 1.0% nickel (Ni) and 0.7g/t platinum group elements (PGE).

Legend Managing Director, Mr Mark Wilson said "this is extremely encouraging at such an early stage and the discovery is new and untested. However, it is important to remember that we've discovered one outcrop and a lot more work is required to understand the full potential of the zone."

"This discovery does however represent an immediate drill target and an airborne Versatile Time Domain Electromagnetic (VTEM) survey is also being considered as a method of identifying additional targets".

"The mineralization was found through district-scale mapping as part of an initiative to assess and evaluate the Cu-Ni-PGE potential of Gum Creek, and this work is continuing. But, we'll have to be patient. The Bungarra Target Area (Figure 1) falls within a tenement that is under application and no drilling can be conducted until after the grant of the exploration licence, which may take up to 4 months."

The gossanous ironstone that contains the mineralization lies within gabbroic rocks close to the base of a layered ultramafic-mafic sill complex, which is informally known as the Bungarra Igneous Complex (Figure 2).

The mineralization is interpreted to be contained within oxidised magmatic sulphide located within a hybrid zone at the base of the Bungarra Igneous Complex. Potentially, Legend has in excess of 10km of this prospective hybrid zone within its project area.

Table 1: Surface Rock-Chip Assay Results

Coordinates for All Samples:		6980350N 750030E (GDA-94 Zone-50)						
Description	Cu %	Ni %	Pt ppb	Pd ppb	Rh ppb	Ru ppb	Os ppb	Ir ppb
Grab Sample	5.7	1.0	146	500	43	2	3	2
Grab Sample	2.1	0.51	91	404	65	7	3	6
Grab Sample	0.15	0.55	108	41	316	34	1	26
3m Channel Sample	0.33	0.22	113	415	85	10	2	6

Copper (Cu) and Nickel (Ni) assayed by XRF. Platinum (Pt), Palladium (Pd), Rhodium (Rh), Ruthenium (Rr), Osmium (Os) and Iridium (Ir) assayed by 25g fire assay (nickel sulphide collection) ICP-MS at Ultra Trace Pty Ltd, Perth.
 1000 parts per billion (ppb) = 1 part per million (ppm) = 1gram per tonne (g/t)
