

Diamond Drilling Commences at Rockford Project, Fraser Range

Legend Mining Limited (“Legend”) is pleased to announce that diamond drilling has commenced at Area D at its Rockford Project in the Fraser Range of Western Australia. The two hole (1,050m) programme is targeting recently defined fixed loop electromagnetic conductors D6 and D7/D8 see Figure 1, as announced to the ASX on 2 May 2016.

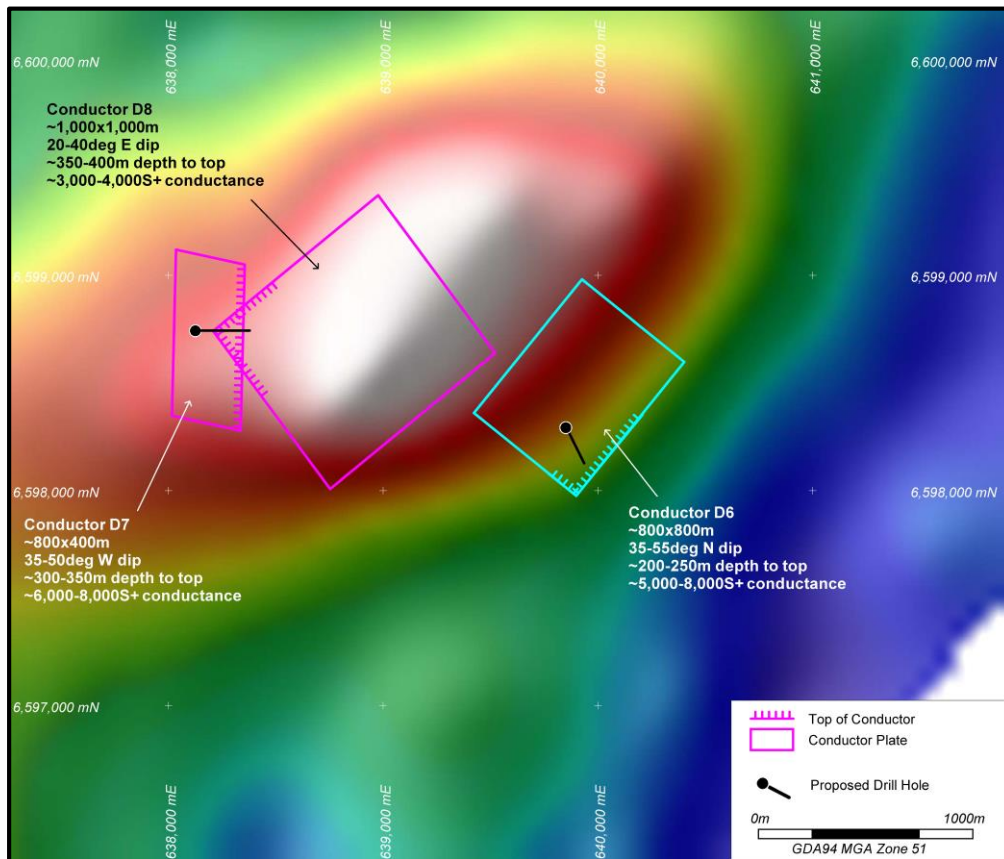

Figure 1: Proposed Drillholes on FLTEM Conductor Plates (Residual Gravity)

Drillhole RKDD001 is testing conductor D6, which has a modelled conductance of 5,000-8,000S, at a target depth of 325-400m. The second drillhole is designed to intersect conductors D7 (6,000-8,000S) and D8 (3,000-4,000S) with target depths for the two features ranging between 400-550m. The planned depths for the holes are 450m and 600m respectively.
